PRODUCT REQUIREMENTS DOCUMENT

Tendo

keep your way

Version 1.1 | 30 Sep 2026 | Engineering Ready

Source of truth
Approved Tendo prototype + Tendo PRD v1.0 + the closed product-decision register in this document. If the prototype and this PRD conflict, v1.1 wins.

Status
All 45 previously open product decisions are closed. Remaining work is design refinement for a small set of states and engineering implementation.

TENDO

keep your way

Document control

Field	Value
Product	Tendo
Document	Product Requirements Document
Version	1.1
Date	30 September 2026
Status	Engineering Ready
Primary platforms	iOS and Android
Product principle	Make commitments -> keep them -> measure consistency
Social principle	Keep your way, together - private accountability, not social media
MVP boundary	AI Coach, Advanced Analytics, deeper Customization, Widgets, Live Activities and full Calendar integration are post-MVP

How to use this PRD

This document is the implementation source of truth for the Tendo MVP. Product rules in v1.1 are final for the first build unless explicitly changed through a documented product change. Sample names, scores and dates are illustrative; rules and thresholds are normative.

1. Product overview

Tendo is a mobile app for recurring personal commitments. Users define the things that make up a good day for them - making the bed, working out, studying, reading, brushing their teeth - and hold themselves to those commitments consistently. Tendo turns each day into a single 0-100% Discipline Score, tracks streaks and progress, and supports small private groups where shared commitments are scored and ranked fairly.

> **Tendo is not a task manager**
> A task manager asks: "What do I need to get done?" Tendo asks: "What did I commit to doing consistently?"

Core loop: make commitments -> keep them -> measure consistency.

Social layer: keep your way, together. Groups are private and invitation-based. There is no public feed, posts, comments, follower system or direct messaging in the MVP.

2. Problem statement

- Habit trackers can reward trivial check-marks, making a headline number easy to game and hard to trust.
- To-do apps treat recurring commitments like one-off tasks and usually do not measure consistency over time.
- Real life breaks rigid systems. Illness, travel, shift work and late nights can unfairly destroy streaks.
- Accountability products often drift into social-media behaviour instead of helping people keep commitments.
- Users lose trust when they cannot understand exactly why a score changed.

3. Product vision

Tendo is an honest, calm record of whether you kept your word to yourself. It should feel supportive but not easy to game, flexible but still disciplined, social but not social media, and powerful without becoming busy.

> **Guiding rule**
> Mood changes the conversation, not the rules. Mood never changes score, weights, requirements or leaderboard outcomes.

4. Target users

User	Need
Self-improver	Stronger daily discipline around fitness, study, focus and sleep.
Everyday organiser	Consistency with chores, hygiene, tidying, hydration and other ordinary routines.
Accountability seeker	Private mutual accountability with a small group of friends, without a social network.
Irregular-schedule user	Custom day end, timezone safety, rescheduling, travel and recovery handling.

Age rule

MVP is intended for users aged 16 and older. Signup uses a simple 16+ confirmation rather than collecting date of birth. If legal review for launch markets requires a different mechanism, the age gate may change without altering core product behaviour.

5. Core value proposition

- One honest number. A weighted personal Discipline Score with a transparent breakdown.
- Real life is allowed. Skip, move, pause, travel, recovery and optional states are recorded explicitly.
- Fair, private accountability. Groups use shared commitments only and rank by percentage, never by task volume.
- Genuinely useful for free. The daily product and social accountability remain free; Pro removes the two-group limit.

6. MVP scope

P0 - launch-blocking core

- Account registration, verification, sign-in and password reset.
- Onboarding, day-end setting and notification explainer.
- Personal commitment creation and management.
- Today screen, completion, skip/pause/archive/delete and score updates.
- Discipline Score, score breakdown and core streaks.
- Privacy & Data hub, account deletion and accessibility baseline.
- Friends, groups, shared commitments, group scoring and leaderboard.
- Block/report/mute and social privacy.

P1 - launch scope

- Amount, duration and weekly-target commitment types; custom scheduling and one-day reschedule.
- History, edit-day flow, Progress tab, Weekly Review, Commitment Packs, Travel Mode and Recovery Day.
- Notifications/reminders, nudges, group settings, roles and recap.
- Tendo Pro, two-group limit, subscription management, restore purchases and downgrade grace flow.
- Offline-first personal actions and queued social actions.

P2 - ship if ready, may follow in first update

- Today Priority, adaptive tone, Why I do this reminder, heavy-day suggestion, Focus Timer, group weekly recap and preset challenge viewing.
- Sync-conflict UI polish and About Tendo.

7. Out of scope / future

Feature	Status	Rule
AI Coach	Future Pro	Coming later only. No AI chat, recommendations or generated plans in MVP.
Advanced Analytics	Future Pro	Weekday, time-of-day, category and mood trends are post-MVP. Basic Progress remains free.
Deeper Customization	Future Pro	Accent colours, app icons, score-ring styles and extended themes.
Widgets	Post-MVP, Free	Today, Remaining and Streak widgets should not delay launch.
Live Activities	Post-MVP	Potential Focus Timer enhancement.
Calendar integration	Post-MVP	Full event display and writing Tendo events are deferred.
Never in scope	-	Public feed, likes, comments, followers, DMs, virtual currency, achievement economy, paid/creator/AI packs, enterprise permissions.

8. Feature requirements framework

Sections 12-35 define implementation behaviour. Each major feature should be built against: purpose, user story, required behaviour, business rules, edge cases, affected screens and acceptance criteria. This v1.1 closes the decision register so engineering should not infer product rules.

9. Screen inventory

Screen / sheet	Area	Core content
Welcome	Auth	Brand, proposition, Create account, Sign in, legal links
Register	Auth	Name, username, email, password, 16+ confirmation, Apple/Google, terms
Verify email	Auth	6-digit code, resend, change email
Sign in	Auth	Email, password, stay signed in, forgot password, Apple/Google
Onboarding	Onboarding	Goal, starter commitments, day-end time
Mood check-in	Daily	Rough / Low / Okay / Good / Great, Skip
Priority check-in	Daily	Pick one commitment or No priority
Today	Today	Score, coach line, priority, commitment rows, add/manage
Score breakdown	Today	Per-item math, totals, weight explanation, recent correction
Commitment detail	Today	Momentum, streaks, reason, weight, history, schedule/actions
Add commitment	Today	Name, type, category, suggestions, cadence, time of day, why, weight
Custom schedule	Today	Pattern, interval, days, time of day, start/end
Packs	Today	Search, pack categories and cards
Pack preview	Today	Items, customize, duplicate handling, add count
Manage commitments	Today / You	Search, status/category filters, actions
Weekly Review	Today / You	Weekly score, delta, strongest/hardest, adjust next week
Action sheets	Sheets	Complete/undo, Skip, Pause, Archive, Optional, Priority, Focus, Move, Delete
Progress	Progress tab	30-day chart, today/average/best, history entry
History	Progress	Daily scores, tags, correction within window
Groups	Groups tab	2-group limit, group cards, join/create, Friends
Create / Join group	Groups	Name/goal/invites or 6-char code
Group home	Groups	Group score, streak, shared commitments, leaderboard, challenge, activity
Group settings	Groups	Roles, members, mute, notifications, leave/report/delete
Shared commitment	Groups	Name, audience, cadence, participants, dates
Friends	Groups / You	Search, requests, friend list
Friend profile	Groups / You	Allowed stats, groups in common, invite/remove/block/report

You	You tab	Profile, people, plan, day settings, appearance, tone, privacy, account
Travel Mode	You	Dates, pause checklist, active summary
Recovery Day	Sheet	Allowance, explanation, confirm/cancel
Notifications / Reminders	You	My Day, social, email and reminder controls
Tendo Pro	You	Unlimited groups, pricing, future benefits, upgrade/restore/manage
Subscription	You	Plan, status, renewal, manage/cancel/restore
Pro downgrade	You	7-day grace, choose 2 active groups
Privacy & Data	You	Social privacy, export, stored data, legal, delete
Sync conflict	Sheet	Keep this version / Use latest
Loading / error states	System	Skeletons, cached fallback, retry copy

10. Navigation structure

Bottom navigation uses four tabs: Today · Groups · Progress · You. The previous "Stats" label is retired; all references use "Progress".

- Today -> Score breakdown, Commitment detail, Add commitment, Packs, Manage commitments, Weekly Review and contextual sheets.
- Groups -> Group home, settings, shared commitments, challenges, Create/Join, Friends and upgrade sheet.
- Progress -> 30-day Progress view -> History and recent-day correction.
- You -> Friends, Groups, Plan/Pro, Subscription, Day end, Reminders, Notifications, Appearance, Tone, Recovery, Travel, Weekly Review, Commitments, Privacy & Data and About.

Creation flows, onboarding, check-in, detail flows and full-screen focus timer hide the bottom tab bar. Pushed screens use a text back link naming the parent. Choice sheets always provide an explicit Cancel or Not now.

11. User journeys

J1 - New user to first day

1. Create account -> verify email.
2. Choose username and confirm 16+ eligibility.
3. Complete three-step onboarding: goal, starter commitments, day-end time.
4. Notification explainer -> OS prompt only after Continue.
5. Mood check-in -> optional Today Priority -> Today.
6. Complete/log commitments; score remains Too new to rate until sufficient history exists.
7. Day auto-closes at configured day end; user may also close out manually.

J2 - Returning daily

Open -> mood check-in (or Skip) -> optional priority -> Today -> optionally adjust the day -> complete/log through the day -> close-out/reflection.

J3 - Social accountability

Friends -> search username -> request/accept -> Create group -> invite -> shared commitment acceptance -> group leaderboard -> rate-limited nudges -> weekly recap.

J4 - Free group limit

At 2 active groups, Create/Join/Accept invite opens the same calm Pro upgrade sheet. Dismissing it changes nothing.

J5 - Real life

Travel Mode pauses selected commitments for a date range. Recovery Day protects the day when legitimately needed. One occurrence can be moved without changing the recurring schedule.

J6 - Leaving Pro

Pro remains active until the paid period ends, then a 7-day grace period lets the user choose two active groups. Others become inactive, never deleted.

12. Commitment creation & management

Add commitment flow

8. Name - free text.
9. Track type - Done/not done · Reach an amount · Spend time · Times per week.
10. Category - Body · Mind · Focus · Craft · Chores · Other.
11. Suggested commitments for the selected category; Other has none.
12. Cadence - Every day · Weekdays · 3x a week · Custom.
13. Time of day - Morning · Afternoon · Evening · Any time (default).
14. Why I do this - optional, one line.
15. Weight card - new commitments begin at x1.0.
16. Add commitment.

Custom schedule

- Pattern: Every day, Weekdays, Weekends, Specific days, X times per week, Every X days.
- X times per week uses a 1-7 stepper. Every X days uses a 2-30 day interval.
- Start and optional End use native date pickers.
- A plain-language schedule summary appears before Save.

Editing rules

- Name and category may always be edited.
- Type may be changed only before the first logged progress/completion. After that it is locked to protect historical meaning.
- Schedule edits create a new effective schedule; past-day snapshots never change.
- Duplicate personal names trigger a warning but can be intentionally added.
- Permanent Delete always requires confirmation. Archive is the preferred non-destructive action.
- At 15 active personal commitments, show a one-time dismissible "Keep your list meaningful" suggestion. Never block creation.

Pause

Pause supports Until I resume and Until date. Paused commitments disappear from Today, keep history and do not affect score or streak while paused.

13. Commitment types

Type	Target	Today display	Logging	Score rule
Simple	None	Checkbox + name	Hold to complete / action	0 or 100%
Amount	Numeric + unit	e.g. 1.4 / 2 L + bar	Quick adds / manual value / Done	value / target, capped at 1
Duration	Minutes	e.g. 42 / 60 min + bar	Quick adds / manual / timer / Done	minutes / target, capped at 1
Weekly target	1-7 times/week	e.g. 2 / 3 this week	+1 / Done	Excluded from daily score; evaluated in weekly consistency and Weekly Review

Units

Amount commitments offer common units (L, ml, glasses, steps, pages, reps, km) plus a short Custom unit. Units are display metadata and do not change the scoring formula.

Focus timer integration

When a Focus Timer finishes for an eligible Duration commitment, elapsed time auto-logs and an Undo toast appears. If the user leaves early, ask whether to log elapsed time. Custom timer length is 5-180 minutes; presets are 25 / 45 / 60.

14. Commitment states

State	Visible cue	Score	Streak effect
Pending	Outlined box	0 until complete; in denominator	No increment yet
Completed	Filled box + check; row moves below unfinished	Full / proportional credit	Increments when requirement is met
Missed	History label Missed	0	Breaks relevant streak
Skipped	Dash + SKIPPED label	Excluded from numerator and denominator	Preserves commitment streak; does not increment
Optional	OPTIONAL label	Excluded; cannot lower or bonus core score	Unaffected
Paused	PAUSED label; hidden from Today	Not due	Frozen
Rescheduled	Removed from source day; appears target day	Not due source; due target	Preserved only if moved occurrence is completed
Archived	ARCHIVED in Manage	Not due	Frozen
Travel-paused	TRAVEL context	Not due	Preserved
Recovery day	RECOVERY day tag	No numeric day score	Personal streak preserved, not incremented

Undo is available on the same day. Completed and skipped items return to their original position when undone. State must always be identifiable without relying on colour alone.

15. Discipline Score

Purpose

A single objective, explainable measure of how well the user kept today's personal commitments.

Adaptive weight

> **Final formula**
> For commitments with at least 5 scheduled occurrences in the last 30 days: weight = 1 + miss rate, rounded to the nearest 0.1 and capped at x2.0. New/insufficient-history commitments remain x1.0. Weight updates once at day close.

30-day completion	Weight example
100%	x1.0
80%	x1.2
50%	x1.5
20%	x1.8
0%	x2.0

Daily score

Due personal commitments include pending/completed measurable commitments that are not optional, skipped, paused, archived, travel-paused or moved away. Group commitments never enter the personal score. Weekly-target commitments are excluded from the daily denominator.

For each due commitment, points = round(weight x 10). Credit is 1 for a completed Simple item or proportional value/target for Amount and Duration. Daily Score = round(sum(points x credit) / sum(points) x 100).

- Mood never affects score or weight.
- Today Priority is visual only.
- Score updates immediately on completion, undo, logging or state changes.
- If nothing is due, show "- · Nothing due today". Do not show 100%.
- Until 5 completed Tendo days exist, show "Too new to rate" instead of a headline score comparison.

Successful day threshold

Default successful-day threshold is 80%. Users may choose 70%, 80%, 90% or 100% in Settings. This threshold drives the personal daily streak and Weekly Review clean-day count.

Score breakdown

Tapping the score shows each due commitment, its state/progress, weight, earned/possible points, excluded skipped items, the total, the skip rule and a concise explanation of the heaviest adaptive weight. Every displayed score must reconcile exactly to the breakdown total.

16. Streaks

Streak	Rule
Commitment streak	Consecutive scheduled occurrences completed. Skip preserves but does not increment. Reschedule follows the moved occurrence. Weekly-target streaks count successful weeks; Every-X-days counts scheduled occurrences.
Personal streak	Increments when daily score meets the user's success threshold. Recovery, Travel and naturally empty days preserve but do not increment. A scored day below threshold resets.
Group streak	Consecutive group days where every participating member completes 100% of required shared commitments due that day. A normal Skip does not satisfy the streak. Group-authorized optional/excused items are excluded.

Timezone changes never break streaks. The previous day remains anchored to its original timezone/day boundary.

17. Mood check-in & adaptive tone

First open each Tendo day: Rough · Low · Okay · Good · Great. Skip is always visible. Mood is private and is never shown to friends, groups or leaderboards.

- Users may change today's mood once before day close from Today.
- Skipping suppresses the check-in until the next Tendo day.
- Tone preference: Gentle · Balanced (default) · Push me. Mood shifts copy by at most one step.
- Use a curated copy matrix, not generated text. Copy remains calm and never uses guilt or shame.
- Mood changes copy only; it never changes score, weight, requirements or ranking.

18. Weekly Review

Weekly Review is a short Sunday review, not an analytics report. Sunday is fixed for MVP; configurable week-ending day is post-MVP.

- Headline weekly average, delta vs previous week when available, successful/clean days, best streak, strongest and hardest commitments.
- Expandable daily bars and commitment consistency.
- Actions: Keep everything · Review commitments · Adjust schedule.
- Last 8 weekly reviews are browsable.
- Recovery and Travel days appear in the timeline but are excluded from the weekly average.

19. Commitment Packs

Packs are curated, free, editable starting points. They are not a marketplace.

Library

32 launch packs: Morning Reset, Night Reset, Better Sleep, Gym Routine, Beginner Fitness, Running, Exam Week, University Day, Deep Work, Productive Workday, Coding Routine, Reading Habit, Clean Room, Weekly Cleaning, Personal Hygiene, Self-Care, Mental Reset, Phone Detox, Better Eating, Hydration, Creative Routine, Writing Routine, Language Learning, Side Project, Weekend Reset, Travel Routine, Minimal Day, Discipline Starter, No-Procrastination, Work From Home, Posture & Mobility, Digital Clean-Up.

Pack metadata and categories

Pack browse categories are organizational only. Every commitment inside a pack maps to one of the six actual commitment categories: Body, Mind, Focus, Craft, Chores or Other.

Search and duplicates

- Unified Add search returns packs, individual suggestions and categories.
- Case-insensitive duplicate names are flagged.
- Duplicate actions are Keep existing (default) or Add another. The separate Skip duplicate action is removed.
- Duplicates start unticked in Customize mode. CTA count always matches what will actually be added.

20. Friends & friend requests

Friendships are mutual and require acceptance. Search works by display name or username. No follower model exists.

Username rules

Username is chosen during onboarding after account creation. It is 3-20 characters, case-insensitive unique, and may contain letters, numbers and underscore. Users may change it once every 30 days.

Friend profile

Shows allowed weekly score/streak data, groups in common, Invite to group, Remove friend, Block and Report. Commitment names are never shown on profiles. Optional status is limited to 60 characters and edited from Edit Profile.

21. Groups

Groups are private circles of up to 12 people. They exist for shared accountability, not social posting.

Roles

Capability	Owner	Admin	Member
Rename group	Yes	No	No
Delete group	Yes	No	No
Appoint/remove admins	Yes	No	No
Invite/remove members	Yes	Yes	No
Create/edit shared commitments	Yes	Yes	No
Manage preset challenges	Yes	Yes	No
Participate / complete / nudge / mute / report	Yes	Yes	Yes

Ownership

An owner must transfer ownership before leaving. If the owner is the only member, the app offers Delete Group instead. Custom group icons are deferred; MVP uses initials avatars. Rename lives in Group Settings.

Creation and capacity

- Group name required; goal optional; first shared commitment optional.
- Invite friends or share a 6-character code that expires after 48 hours.
- At 12 members, joining/inviting is blocked with clear copy.
- Challenges are preset templates in MVP; no custom challenge builder.

22. Shared commitments

Shared commitments belong to a group and each participant keeps them individually. They never enter the personal Discipline Score.

- Creation always shows the audience label before save.
- Invited members must accept participation before the commitment appears on their Today screen.
- A shared-commitment detail screen shows schedule, participants and permitted completion status.
- Group scoring uses equal weights. Adaptive personal weights never apply to shared commitments.
- If a shared commitment matches a personal commitment, ask Count for both or Keep separate. Never merge silently.

23. Group scores & leaderboards

Group scores measure only that group's shared commitments. Ranking is by percentage, never by personal task count or XP. Ties share the same rank with no artificial tie-breaker.

Period	Rule
Today	Shared commitments due today
This Week	Default; average of scored group days
This Month	30-day group performance

New members and privacy

- New members are Unranked until they have 3 scored group days. Then they rank using available group days until they reach the full period.
- Personal Discipline Score privacy never hides the member's group-specific shared score from that group.
- Nudge appears when a member has unfinished shared commitments due today, not from a generic low-percentage threshold.

Nudges

Preset messages only; no free text. One nudge per recipient per sender per day. Queued nudges count toward the limit when queued and expire at the recipient's Tendo day end.

Weekly recap

Shows group score and delta, number of members who improved, strongest shared commitment, most room to improve and top group streak. Never names the lowest performer.

24. Privacy controls

Privacy-first defaults

Setting	Default
Personal Discipline Score	Only me
Personal commitment names	Private
Personal streak	Hidden
Nudges	Friends only

Shared commitment participation and group-specific completion remain visible to the relevant group because they are necessary to the group feature. Mood and reflections are always private. Personal commitments never become group-visible automatically.

Blocked users cannot see, add, invite or nudge the user and are not notified that they were blocked.

25. Notifications

An in-app explainer appears before the OS notification permission. Nothing triggers the native permission dialog without user action.

Defaults after permission is granted

Category	Default

Morning overview	On
Weekly Review	On
Commitment-specific reminders	Off until user adds
Evening check-in / Last call	Off
Friend requests / group invites / nudges / challenges / recap	Off
Marketing email	Off

Reminder times are editable from Reminders. A commitment-specific reminder is also editable directly from the commitment. No streak-loss panic notifications are allowed.

26. Tendo Free vs Tendo Pro

Tendo Free	Tendo Pro
All personal commitments, types, packs, score/breakdown, streaks, history, Progress, Weekly Review, check-in, tone, travel/recovery, reminders, focus timer, privacy and all social features. Up to 2 active groups.	Everything in Free plus unlimited active groups. Future benefits may be shown only as Coming later: AI Coach, Advanced Analytics, deeper Customization.

Never paywall checking commitments, the personal score, streaks, history, friends, leaderboard participation, shared commitments or the first two groups.

27. Two-group Free limit

- Free users may create or belong to at most 2 active groups.
- At 2/2, Create, Join and Accept invite all open the same Pro upgrade sheet.
- Inactive groups after downgrade do not count toward the Free limit.
- Leaving an active group immediately frees a slot.

28. Pro upgrade & downgrade behaviour

Upgrade

The natural upgrade moment is attempting a third active group. The sheet explains that Pro lifts the group limit while everything else the user already uses remains free. Not now is always clearly visible. No fake urgency, timers or strike-through pricing.

Downgrade

- Cancelling keeps Pro until the paid period ends.
- If more than 2 groups remain, start a 7-day grace period and ask the user to choose 2 active groups.
- If no choice is made by the deadline, keep the 2 most recently active groups; all others become inactive, not deleted.
- If the user owns a group that becomes inactive for them, transfer ownership to the oldest Admin; if none, to the longest-tenured remaining member.
- Inactive groups keep history, stop shared commitments/leaderboard participation/notifications for that user, and can be reactivated by upgrading or freeing a slot.

29. Subscription screens

Launch pricing hypothesis

Initial store configuration: Monthly $2.99 equivalent and Yearly $24.99 equivalent, localized by Apple/Google store pricing. These are launch hypotheses, not hardcoded strings in application logic.

- No free trial in MVP.
- Price, billing period, automatic renewal and cancellation information are visible before purchase.
- Platform copy adapts to Manage in App Store / Manage in Google Play.
- Restore Purchases is always available.
- Future Pro features are labelled Coming later and are not functional.

30. Travel, Recovery & flexible-day behaviour

Travel Mode

- Native From / Until date pickers; future trips may be scheduled.
- User chooses which active commitments pause while away.
- Paused items are excluded from score and do not break streaks.
- Travel automatically ends at the next Tendo-day boundary after the Until date.
- History clearly marks Travel days.

Recovery Day

- Allowance: 2 Recovery Days per calendar quarter.
- Can be applied only to the current day before it closes; not retroactive.
- No numeric Discipline Score is used for that day or included in averages.
- Personal streak is preserved but does not increment.
- Recovery is explicit in Today and History and is never triggered silently.

Heavy-day suggestion

When 8 or more required personal commitments are due, Tendo may offer a rule-based suggestion to mark some Optional. It never changes commitments automatically.

Anything different today?

Accessible after morning check-in and from Today all day. The sheet scrolls through every due commitment and offers Move · Optional · Skip. It is never limited to the first five.

Day end and corrections

- Day-end choices: 11:00 PM, Midnight, 1:00 AM, 2:00 AM, 3:00 AM and Custom.
- The Tendo day auto-closes at the configured boundary if the user does nothing.
- Recent-day correction window is 12 hours after close. Corrections always show "Edited after day ended".
- Close-out reflection is optional and never affects score.

31. One-day rescheduling

- Move only today's occurrence; recurring schedule remains unchanged.
- Choose Tomorrow, Later this week or native date picker up to 30 days ahead.
- If the destination already has the same commitment occurrence, ask before creating another.
- Reschedule is not available after the source day closes; use Edit Day for correction instead.
- If target day already has 8+ required commitments, show a warning but never block the move.
- Moved occurrence is excluded from the source score and becomes due on the destination day.

32. Offline, timezone & sync

Offline-first personal actions

Viewing Today, completing/logging, cached history and creating/editing personal commitments all work offline and save locally first. The UI shows a quiet Offline banner and syncs when connectivity returns.

Queued social actions

Friend requests may remain queued. Group-code joins respect the invite code's 48-hour expiry. Nudges count against the daily limit when queued and expire at the recipient's Tendo-day end.

Timezone

A timezone change applies from the current Tendo day forward. Previously closed days remain anchored to their original timezone so streaks are safe.

Conflicts

If the same record changes on multiple devices, show the conflict the next time the user opens the affected commitment or screen. Offer Keep this version and Use latest version with human-readable timestamps; do not expose database terminology.

33. Accessibility

- Body and secondary text contrast at least 4.5:1 in both themes.
- Touch targets at least 44 x 44 pt.
- No state is communicated by colour alone.
- Dynamic Type / large text must not truncate critical controls.
- Charts have text equivalents.
- Reduce Motion removes non-essential sweep/reorder animations.
- Logical screen-reader order follows visual order; sheets are announced as dialogs.
- Hold-to-complete is never mandatory: VoiceOver/TalkBack exposes a Complete custom action and detail screen provides Complete now.

34. Privacy, data & account deletion

Data minimisation

MVP does not request location, contacts, camera, microphone or health data. Any future sensitive permission requires an in-app explanation before the OS prompt.

Export

Export includes profile, commitments, schedule history, completion history, scores, streaks, group memberships/shared commitments, mood check-ins and reflections. Request status is confirmed in-app and delivered through an authenticated download flow or secure email link.

Deletion

- Delete Account is available in-app without contacting support.
- Require recent re-authentication plus typing DELETE.
- Account is deactivated immediately after confirmation.
- Primary cloud records are purged within 7 days; backup copies are purged within 30 days.
- Shared-group contributions are anonymized where removing them would corrupt other members' historical group records.
- If a store subscription is active, warn and link to store management, but do not block account deletion.

Final Privacy Policy, Terms and retention wording require legal review before public launch. Draft screens must not invent legal claims.

35. Empty, loading, error & edge states

Situation	Required state
No commitments	Nothing committed yet. + Add your first commitment
All done	100% · All commitments complete. keep your way + Close out
Too new to rate	- · Too new to rate · day N of 5
Nothing due	- · Nothing due today
No groups	Discipline holds better with witnesses.

No friends	No one yet. + privacy reassurance
No search result	Specific, local empty copy
Offline	Cached data remains interactive + sync-when-back copy
Remote refresh failure	Couldn't refresh. Your saved data is still here. + Retry
First remote load	Restrained skeletons; never decorative shimmer
Confirmation	Bottom toast, brief and factual

Whenever cached data exists, show it immediately instead of replacing the screen with a spinner or blank state.

36. Design-system requirements

Visual direction

Quiet, authored, high-contrast mobile UI. No gradients, glassmorphism, decorative emoji, generic icon-card rows, low-contrast dark surfaces or stock component-library styling. Use cards only where grouping is useful.

Core tokens

Token	Warm dark	Pure black	Use
Background	#14100D	#000000	App background
Surface	#1E1915	#0D0D0D	Rows, sheets, selective cards
Raised/divider	#2A231D	#1B1B1B	Tracks, dividers, avatars
Border	#3A312A	#272727	Outlined controls
Text	#F4EDE4	same	Primary text
Secondary	#A79A8C	same	Secondary
Muted	#9A8E82	same	Lowest allowed muted text
Olive	#8C9B6E	same	Primary action, score, positive state

Typography

MVP uses Montserrat with intentional weights: 400/500 for body, 600 for controls/labels and 700 for key numerals/headings. Do not use a single semibold weight everywhere. If Tendo later licenses or commissions a distinctive brand face, that is a separate design-system migration.

Motion

Motion communicates state only: completion sweep, score update, row reordering and sheet transitions. Reduce Motion disables non-essential animation. No decorative hover effects or scroll reveals.

Widgets

Widgets are post-MVP and free. They must not delay launch or be required to justify Pro.

37. Acceptance criteria summary

- Every headline Discipline Score exactly reconciles to the score breakdown.
- Mood and Today Priority never change score or leaderboard outcomes.
- Weekly-target commitments do not enter the daily score.
- Completed rows settle below unfinished rows while unfinished order is preserved.

- Skipped items are excluded from score; Recovery has no numeric day score; Travel-paused commitments are not due.
- History snapshots never rewrite when schedules change.
- Personal commitments never enter a group score and never become shared silently.
- Group ranking is percentage-only; ties share rank.
- A Free user cannot end up with more than 2 active groups through any path.
- No group or history is deleted when Pro ends.
- All destructive actions that permanently remove user data require explicit confirmation.
- Core personal actions work offline and sync later.
- All completion/state interactions have accessible alternatives.
- AI Coach, Advanced Analytics, deeper Customization and Widgets are not built as working MVP features.

Appendix A - Closed decision register

All 45 v1.0 decision items are closed below. This appendix is normative and exists to prevent engineering from reopening product behaviour during implementation.

#	Decision	v1.1 final rule
1	Minimum age	16+ confirmation; no DOB in MVP.
2	Navigation label	Progress everywhere; retire Stats.
3	Custom schedule inputs	1-7 times/week; 2-30 day interval; native date pickers.
4	Time of day	Visible on Add Commitment; defaults Any time.
5	Editing commitment	Name/category editable; type locks after first record.
6	Duplicate personal names	Warn but allow.
7	Delete confirmation	Always confirm permanent delete; Archive preferred.
8	Meaningful-list guidance	One-time suggestion at 15 active commitments; never block.
9	Weekly-target daily score	Excluded from daily score; weekly measurement only.
10	Amount units	Common unit list + Custom.
11	Proportional credit toggle	No toggle; Amount/Duration always proportional.
12	Focus timer logging	Auto-log on finish; early exit asks whether to log.
13	Pause end	Until I resume or Until date.
14	Skip/reschedule streak	Skip preserves/no increment; reschedule follows moved occurrence.
15	Adaptive weight	1 + miss rate; 30-day window; min 5 occurrences; cap x2.0; update at close.
16	Successful-day threshold	80% default; user chooses 70/80/90/100.
17	Zero due	Show - / Nothing due today.
18	Streak rules	Threshold personal streak; Recovery/Travel/empty preserve; weekly target per week; group streak requires all required shared items.
19	Mood behaviour	One edit before close; Skip until tomorrow; curated copy matrix.
20	Weekly Review	Sunday MVP; last 8 browsable; Recovery/Travel excluded from average.
21	Pack mapping	Each item maps to one of six commitment categories.
22	Unified search	Search packs + suggestions + categories.
23	Duplicate pack actions	Keep existing / Add another only.
24	Friends identity	Block/report on profile; usernames 3-20, unique, 30-day change cooldown; status max 60 chars.
25	Group roles/ownership	Role-gated actions; owner transfers before leaving; initials icon only in MVP.
26	Group creation/capacity	First shared commitment optional; block joins at 12; preset challenges only.

27	Shared participation/weight	Detail screen; participant acceptance; equal group weights.
28	Leaderboard new/hidden/nudge	Nudge unfinished due items; group score remains visible; new members unranked until 3 scored days.
29	Privacy defaults	Score Only me; commitments Private; streak Hidden; nudges Friends only.
30	Notification defaults	Morning + Weekly Review on after permission; social/marketing off; reminders opt-in.
31	Free limit edge	Invite at 2/2 opens Pro sheet; inactive groups do not count.
32	Pro downgrade	7-day grace; no-choice keeps 2 most recent; deterministic ownership transfer.
33	Subscription	Launch hypothesis $2.99/mo / $24.99/yr localized; no trial; platform-specific management copy.
34	Travel	Native date pickers; future trips; auto-end after Until date boundary.
35	Recovery	2/quarter; current day only; no numeric score/average; streak preserve.
36	Adjust today	After check-in + Today entry; all due items scrollable.
37	Day end/correction	11 PM-midnight-1/2/3 AM + Custom; auto-close; 12h edit window.
38	Focus custom length	5-180 min.
39	Reschedule	Up to 30 days; duplicate prompt; none after close; heavy warning at 8+ required.
40	Sync/queue	Conflict on next open; nudge counts when queued and expires at recipient day end; invite-code expiry retained.
41	Hold accessibility	Screen-reader Complete action + Complete now control.
42	Deletion	Immediate deactivation; 7-day primary purge; 30-day backups; anonymize shared history; reauth + DELETE.
43	Loading/errors	Cached-first, restrained skeletons, saved-data-safe error copy.
44	Typeface	Montserrat MVP with 400/500/600/700 weights.
45	Widgets	Post-MVP and free.

Appendix B - Engineering priority & specification status

Specification status is Locked unless marked Design refinement. Design refinement means the product rule is final but the prototype needs a final visual pass before implementation of that specific state.

Feature	Scope	Priority	Spec / design status
Auth + verification	MVP	P0	Locked
Onboarding + 16+ + username	MVP	P0	Design refinement
Today + completion + ordering	MVP	P0	Locked

Commitment creation + suggestions	MVP	P0	Design refinement
Core states Skip/Pause/Archive/Delete	MVP	P0	Design refinement
Discipline Score + adaptive weight	MVP	P0	Locked
Score breakdown	MVP	P0	Locked
Personal/commitment/group streaks	MVP	P0	Locked
Friends/requests/profiles	MVP	P0	Design refinement
Groups core	MVP	P0	Locked
Shared commitments + acceptance	MVP	P0	Design refinement
Group score/leaderboard	MVP	P0	Locked
Privacy + moderation	MVP	P0	Design refinement
Privacy/Data + deletion	MVP	P0	Locked
Accessibility baseline	MVP	P0	Design refinement
Amount/Duration/Weekly types	MVP	P1	Design refinement
Custom schedule/reschedule	MVP	P1	Design refinement
Progress + History	MVP	P1	Locked
Weekly Review	MVP	P1	Locked
Packs	MVP	P1	Design refinement
Travel / Recovery	MVP	P1	Design refinement
Notifications / Reminders	MVP	P1	Design refinement
Offline / queue	MVP	P1	Locked
Tendo Pro / 2-group limit	MVP	P1	Locked
Subscription / restore / downgrade	MVP	P1	Design refinement
Mood check-in	MVP	P1	Locked
Today Priority	MVP	P2	Locked
Adaptive tone	MVP	P2	Design refinement
Focus timer	MVP	P2	Design refinement
Group recap / preset challenge view	MVP	P2	Locked
Sync conflict UI	MVP	P2	Design refinement
AI Coach	Future Pro	-	Out of MVP
Advanced Analytics	Future Pro	-	Out of MVP
Deeper Customization	Future Pro	-	Out of MVP
Widgets	Post-MVP Free	-	Out of MVP
Live Activities	Post-MVP	-	Out of MVP
Full Calendar integration	Post-MVP	-	Out of MVP

Engineering handoff
Before implementation, perform one final Claude Design refinement only for rows marked Design refinement. After that pass, freeze product design and begin technical architecture / schema planning. Do not add new features to the MVP without a documented change request.

TENDO

keep your way
